

Dust & fume collectors designed to suit your business

No matter what size your business, dust and fume control is an essential requirement in producing quality work and maintain high levels of OH&S for your employees. Donaldson Australasia have been providing solutions for companies world wide for over 90 years and have provided Torit DCE branded equipment to many of the major car manufacturers (including the recent large scale fume extraction system for Toyota's Units part plant in Altona, Victoria).

Your workshop is just as important.

With Torit DCE brand equipment such as Cabinet Dust collectors and Easy-Trunk & Porta-Trunk fume collectors, Donaldson provides state of the art technology designed to suit your workshop while economically maintaining costs and heightening occupational health and safety standards for employees.

Model Series 50, 60, 70 and 80 Cabinet Dust Collectors cover a wide range of dust and smoke control applications, plus the physical size of these units ensures that they fit almost anywhere in a plant and can be relocated with little effort.

Easy-Trunk and Porta-Trunk mobile fume collection units effectively extract welding fume and smoke from workers' breathing zone.

The Porta-Trunk is ideal for light duty or infrequent operations, and is fitted with a static filter system and a hinged door for easy filter maintenance access.

The Easy-Trunk is suitable for heavier duty or more frequent plant operations, and features a built-in pulse filter cleaning system allowing filter cleansing at the push of a button with a blast of compressed air.

Both collectors are 'plug and go', and can be easily moved around the workshop to be located close to the source of the weld fume.

Operating controls are conveniently located on the hood of the extraction arms of each unit. The company's patented Nanofibre filter technology provides both the Porta-Trunk and Easy-Trunk with longer filter life and an exceptionally high filtration efficiency of 99.999+% on 0.5µm dust particles.
