# You Can't Afford Not to Use a Donaldson

Donaldson is the world leader in engine filter technology and has been servicing the Australian agricultural equipment market for over thirty years. Donaldson has an extensive range of air, fuel and lube filters for all popular models of tractors and combine harvesters.

Most importantly, Donaldson filters incorporate superior design features that will help to optimise your equipment's

performance and efficiency while reducing repair frequency and maintenance costs.

So if you're really serious about cost effective equipment performance, the next time your filters need replacing, make the smart choice.

## Donaldson Air Filters – Leading the way in design, performance, and value

Donaldson's commitment to constantly seeking improvements in filter performance has put the company at the forefront of advances in air filter technology. Here's why:

- *Meets OEM specifications* – Donaldson air filters are the first fit industry standard and are designed to meet or exceed OEM filtration efficiency and capacity requirements for normal service interval applications.
- *Radialseal® self-sealing Technology* – Pioneered by Donaldson this technology provides the most reliable filter seal for optimum engine protection. It also allows for easier serviceability and reduces filter weight and corrosion potential.

- *Long Life Filters* – Donaldson's Endurance™ range of air filters allows for extended service intervals resulting in savings in the areas of downtime, labour, and parts while providing greater efficiency, less engine wear, better fuel economy and improved engine performance.

- *Pleatloc™ pleat saving technique* – Prevents the pleats from bunching together, keeping the pleat open to airflow, even if the media is wet.

- *TopSpin™ Pre-cleaners* – Extends primary air filter life, extends engine life, and reduces operating costs through greater system efficiency.

## Donaldson Liquid Filters leave other brands in the Dust

Donaldson's range of lube, fuel and coolant cartridge and spin-on filters outperform competitive filter brands in design and filtration performance.

- *Superior Design Features* – Donaldson liquid filters incorporate a host of design features that provide superior durability, greater inner seal resilience, more durable media, increased flow without compromising centre tube collapse strength, and stronger filter housing.
- *Media matched to engine specs* – Donaldson carefully matches engine performance with over 26 grades of liquid filter media for

greater engine protection, as opposed to our competitors, who typically use less than 5 media grades.

- *Meet OEM specifications* – Donaldson liquid filters are designed to meet or exceed OEM filtration efficiency and capacity requirements for normal service interval applications.

- *Long Life Filters* – Using proprietary Synteq®, filter media, Donaldson's Endurance range of liquid filters provides extended service intervals and optimised engine performance.

- *Stringent Quality Testing* – During the assembly process Donaldson liquid filters are extensively tested for leaks, hydrostatic burst, pressure fatigue, and seam construction.

## 5 reasons why you can depend on Donaldson

1. First fit industry standard in air filtration, exhaust, and hydraulic systems for heavy-duty applications.
2. Extensive range of air and liquid filters for all popular models of on and off highway vehicles for agricultural, transport, mining and the earthmoving industries.

3. Experienced customer service and technical support team.
4. Cast iron warranty gives you complete coverage against filter failure.
5. Global strength in R&D ensures filter products that deliver leading edge performance and efficiency.
