

Industrial 6x18" Elements

Dimensions:

Height	18"/ 457mm
Diameter	6"/152mm

Features

Industry-standard 6x18" replacement filters are available with many media choices — simply select the beta rating that's needed for your application.

Dimensions fit standard industrial filter housings, and the filters accommodate flow up to 300 gpm per 18" unit. Use the elements singly, or stack multiples within the housing.

The filters are a direct replacement for 6x18 filters from Kaydon, Hilco, Pall, Parker, Baldwin, Nugent, and others. They are the industry-standard size for large lube oil applications, including air compressors, hydraulic return line circuits, etc.

Choose replacement filters with Synteq®, Donaldson's exclusive synthetic media formulation specifically designed for liquid filtration, or natural-fiber cellulose media.

6 x 18 Hydraulic Replacement Cartridges

Media No.	Media Technology	β_{xy} =2/20/75 Rating	Part Number	ID
